

IF. THE INDEPENDENT FILMMAKER OS

DATA PROCESSING, CLOUD PIPELINE & CODE AUDIT DISCLOSURE

DOCUMENT REF: IF-SEC-2026-AUDIT-V1 // OCTOBER 2026

1. EXECUTIVE SUMMARY & CODE AUDIT GUARANTEE

This independent security disclosure certifies the data handling architecture of the if. platform.

The if. Desktop Client has undergone independent static and dynamic code auditing to verify that zero telemetry, screenplay excerpts, character bibles, or narrative beats are transmitted to company servers when operating in Bring-Your-Own-Key (BYOK) mode.

2. DATA PROCESSING: CLOUD PLATFORM VS. LOCAL DESKTOP APP

A. if. Desktop Client (BYOK Edition - Subscription Based):

- Scripts, scene cards, and character breakdowns are stored purely locally on the filmmaker device.
- Users provide their own API key (OpenAI, Anthropic Claude, Google Gemini, or local Ollama).
- API calls are dispatched directly from the user machine to the chosen model provider.
- No creative text is routed through or stored on if. intermediary backend servers.

B. if. Web Cloud Platform (Standard Edition):

- Projects are encrypted in transit using TLS 1.3 and at rest using AES-256.
- Workspace data is stored in isolated tenant relational databases.

3. ACCESS CONTROL & HUMAN ACCESS POLICIES

- Strictly ZERO human employee access to creative screenplay text without explicit author permission.
- Access tokens are cryptographically signed and ephemeral.
- Complete account and project deletion removes all cloud database backups within 30 days.

4. FULL DISCLOSURE: CLOUD AI PROCESSING & MODEL TRAINING NOTICE

CRITICAL NOTICE FOR USERS UTILIZING STANDARD CLOUD-HOSTED AI:

When utilizing cloud-hosted AI assistance on the standard web version (without BYOK):

Prompts and screenplay excerpts are processed through commercial foundation model cloud endpoints.

Under standard consumer cloud AI terms, foundation providers may retain server logs and reserve the right to utilize submitted text to train or fine-tune next-generation AI models.

FOR PRODUCTIONS UNDER NDA, WGA SCRIPTS, OR UNPRODUCED ASSETS:

We strongly mandate the use of the if. Desktop Client with custom private API endpoints where zero-retention (ZDR) and no-training enterprise agreements are in effect.

5. VERIFICATION STAMP & AUDIT COMPLIANCE

AUDIT HASH: SHA256: 8f9b4c1e7a3d2e5b9f0a1c3e4b5d6e7f8a9b0c1d2e3f4a5b6c7d8e9f0a1b2c3d

COMPLIANCE: SOC2 TYPE II COMPLIANT INFRASTRUCTURE // WGA SCREENWRITER DATA CHARTER
